Hazard Assessment and Management

2/3 of participants would like GEVER to be a Hub, 1/3 a Model

- To promote the "**borderless world of science**" with seamless hazard maps built using more uniform methods, software & common data

- To promote the **'best practices' training** – including dealing with media, & how to train citizens and school children for preparedness

- To promote **multi-lateral agreements and collaborations**, post-doc and grad student exchanges and scientist visits throughout Asia

- To promote the use of our imperfect hazard information in **decision-making** so maps trigger and support mitigation actions

- To promote the **involvement of behavioral scientists**, the business community, broadcast media, and local governments in our work
