Reference Material Certificate
NMJ CRM 5602-a
No. +++

Polycarbonate for Positron Hole-size Measurements

This certified reference material (CRM) was produced in accordance with the NMJ’s management system and in compliance with ISO Guide 34:2000 and ISO/IEC 17025:2005. This CRM is intended for use in controlling the precision of measured data, or validating the measurement condition and results in the positron annihilation lifetime technique for polymers and insulators having a positronium component with lifetime longer than 1 ns.

Certified Value
The certified value of the ortho-positronium lifetime is given in the table below. The uncertainty of the certified value is the half-width of the expanded uncertainty interval calculated using a coverage factor (k) of 2, which gives a level of confidence of approximately 95%.

Analysis
The certified value of this CRM was evaluated as the mean of the longest positron lifetimes, each of which was obtained by fitting positron lifetime data for quartz samples to the convolution of a model function. This function was a linear combination of three exponential decays, linked together with a resolution function. The positron lifetime data were collected by recording time intervals between the birth and annihilation of positrons emitted from $^{22}$Na. The uncertainty was calculated as the combined standard uncertainty, taking account of the uniformity of the sample, the repeatability of the measurements, the time-base accuracy of a digital oscilloscope, the total time resolution of the measurement system, and the positron annihilation intensity outside the sample.

Metrological Traceability
A measurement system with a calibrated digital oscilloscope is employed to determine the certified value, which assures traceability of the measured time of the certified value and uncertainty to the International System of Units (SI).

Expiration of Certification
This certificate is valid for one year from the date of the shipment, provided that the material is stored in accordance with the instructions given in this certificate.

Sample Form
This CRM consists of a couple of 2.0-mm-thick square plates with dimension of 15 mm x 15 mm, and is kept in a plastic container.

Homogeneity
The homogeneity of this CRM was determined by measuring positronium lifetimes for 30 plates randomly sampled from 180 plates, cut out of a polycarbonate sheet with a lateral size of 135 mm x 300 mm, and the homogeneity of the analytes was evaluated and is reflected in the uncertainty of the certified value. Thus, this CRM is homogeneous within the range of the uncertainty of the certified value.
Instructions for Storage
This CRM should be stored in a clean light-shielded environment at a temperature between 15 °C and 35 °C. It is recommended to store this CRM in an atmosphere of dry air or nitrogen gas and keep it away from any radioactive sources.

Instructions for Use
Measure the CRM without any deformation by cutting, grinding, etc. As the surface of this CRM is brittle, handle it cautiously.

Precautions for Handling
This CRM is relatively stable under ordinary conditions but is not allowed to be left at a high-temperature environment. Refer to the safety data sheet (SDS) on this CRM before use.

Preparation
Commercially available polycarbonate obtained from a single lot was employed as the raw material for producing this CRM.

Technical Information
The relative intensity of the third component ($I_3$) that is due to the ortho-positronium annihilation is estimated to be 33% with the assumption that the relative intensity of positron annihilation is 10% in the two 7.5-µm-thick Kapton® foils between which the positron source is sealed. The certified value of the ortho-positronium lifetime $\tau$ [ns] is converted to a hole radius ($R$) of 0.294 [nm] based on the quantum mechanical model expressed as:

$$\tau = 0.5 \left[ \frac{R}{R + 0.166} \right] \frac{1}{2 \pi} \sin \left( \frac{2 \pi R}{R + 0.166} \right)^{1.5}$$

The equivalent hole volume is calculated as 0.106 [nm³] by using $V = (4/3)\pi R^3$.

NMIJ Analysts
The technical and production manager for this CRM is Y. Kobayashi and the analyst is K. Ito.

Information
If substantive technical changes occur that affect the certification before the expiration of this certificate, NMIJ will notify the registered customer. Customer registration on the NMIJ Website (given below) will facilitate notification. Technical reports regarding this CRM can be obtained from the contact details given below.

Reproduction of Certificate
In reproducing this certificate, it should be clearly indicated that the document is a copy.

Note
An interlaboratory comparison was carried out for this CRM. The averaged value of the reported ortho-positronium lifetimes was in agreement with the certified value within the range of the expanded uncertainty. The following laboratories participated in this interlaboratory comparison test:
The University of Tokyo
Osaka University, Graduate School of Engineering
Osaka University, Institute of Scientific and Industrial Research
Tohoku University
Chiba University
University of Tsukuba
Tokyo Gakugei University
Japan Atomic Energy Agency
NITTO DENKO
Toray Research Center

Revision history
March 21, 2013: The expiration of this certificate was extended from "March 31, 2014" to "March 31, 2019."
   The description in "Information" was revised.
April 1, 2015: "Metrology Management Center" was renamed to "Center for Quality Management of Metrology."
November 20, 2017: The description in "Expiration of Certification" was changed to "one year from the date of the"
